We roll out 1.8 million stroller wheels monthly

With 1.8million EPA and EVA stroller wheels produced each month, we have the capacity to fill your largest orders. And, our wheels are produced nearly 100% percent in-house. These factors enable us to significantly lower per-unit costs, helping you to lower your bottom line. Buyers in Italy, Japan, Brazil, Spain, UK and US appreciate this difference in price.

Since our stroller wheels are made using only nontoxic, recyclable materials they're free from compounds that can harm end-users, and in turn, damage your business. We check every wheel to be within 0.5mm of accuracy using infrared sorting machines, to maximum product consistency. For samples in as few as two days. So, contact us now...
